The most powerful next-generation OA
pain management treatment available^{1,2}

For chronic pain associated with osteoarthritis of the knee

Cingal[®]

One-Injection Combination Hyaluronic Acid
and Triamcinolone Hexacetonide

Fast-acting, long-lasting pain relief

For patients who demand rapid and long-lasting relief from chronic knee pain associated with OA, there is one treatment that surpasses all others.²

**Anika's Market-Leading
Hyaluronic Acid (HA)**

**Safe and Proven Triamcinolone
Hexacetonide (TH) Steroid**

Micronised TH steroid uniformly
suspended within a high-dose, ultra-pure
and lightly cross-linked HA⁴

Unmatched clinical data proving Cingal's efficacy

Cingal is supported by robust clinical data, consistently proving efficacy and safety, and stronger in terms of pain relief than any other OA pain management injection with published data on the market.

Consistent responder rates^{1,5,6}

**Approaching 1 million injections since
launch in over 35 countries outside the U.S.³**

Anika's market-leading HA is designed to mimic the molecular properties of endogenous HA⁷

Mechanical effect

HA binds well to water, producing a viscous, jelly-like consistency that provides lubrication and acts as a shock absorber within the joint.

Chondroprotective effect

HA has a biomechanical structure that protects cartilage when surrounding chondrocytes.

Analgesic effect

HA diminishes nerve impulses and the sensitivity of nociceptive nerve endings.

TH directly treats inflammation in the joint, providing **fast-acting** pain relief within days of injection¹

**FAST

Cingal: The benefits of a steroid, without the concern

TH is a highly effective, safe, and rapid anti-inflammatory agent of sustained duration.⁸

Cingal (TH+HA) demonstrates an anti-inflammatory and chondroprotective effect, and diminishes side effects associated with steroid supplementation alone.⁹

Optimal high molecular weight HA

Results in greater pain reduction and longer duration of effect than low molecular weight or excessively high molecular weight HA.¹⁰

Indications

Cingal® is indicated as a viscoelastic supplement or a replacement for synovial fluid in human knee joints. Cingal® is well suited for rapid and long-term relief of the symptoms of human knee joint dysfunctions such as osteoarthritis. The actions of Cingal® are long-term relief of symptoms by lubrication and mechanical support supplemented by short-term pain relief provided by triamcinolone hexacetonide.
